

Spring, Spring Boot, and MVC | Lesson 2

Practice: Spring Boot Personal Library

Instructions

In this exercise, you will be working with an existing Spring Boot application in the [Spring Boot-2](#) Github Repo that was created using Spring Initializr. This is an application for viewing a personal library of books, movies and music albums.

Tasks

1. Generate url endpoints.
2. Create a model class for representing a music album.
3. Create a model class for representing a movie.

Setup

Make sure you follow all of these steps when you complete work in our GitHub repos:

- Fork the repo.
- Clone the repository to your local machine.
- Start working on the code.
- When you are finished, commit your changes and push them to your fork.

Submission

Submit the url for your GitHub repo in the field below.
